

Question 6.

- a) This is not working fine. The for loop doesn't read all the characters in the string. It just reads the first character and returns and exits the loop.
- b) This is not working since the for loop is not written correctly. It doesn't enter the for loop so the characters are not read.
- c) This is not correct. It doesn't work and gives TRUE only when the last character is Capital else gives wrong result. It checks just the last letter.
- d) This is incorrect since the Return function is placed at the wrong place and is outside the function. The indentation is wrong.
- e) This is incorrect since the Return function is placed at the wrong place and is outside the function. The indentation is wrong.
